Measured working-set runtime

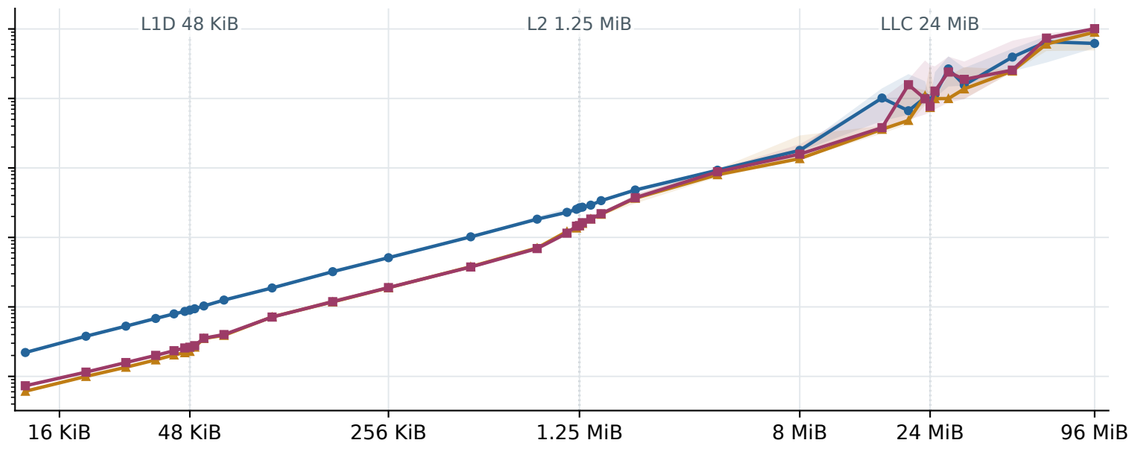

34 measured sizes per series · 3 kernels × 2 data types · CPU 0 pinned · fresh run 20261019T005422Z

Optimized scalar · Compiler auto-vectorized · Explicit AVX2 intrinsics

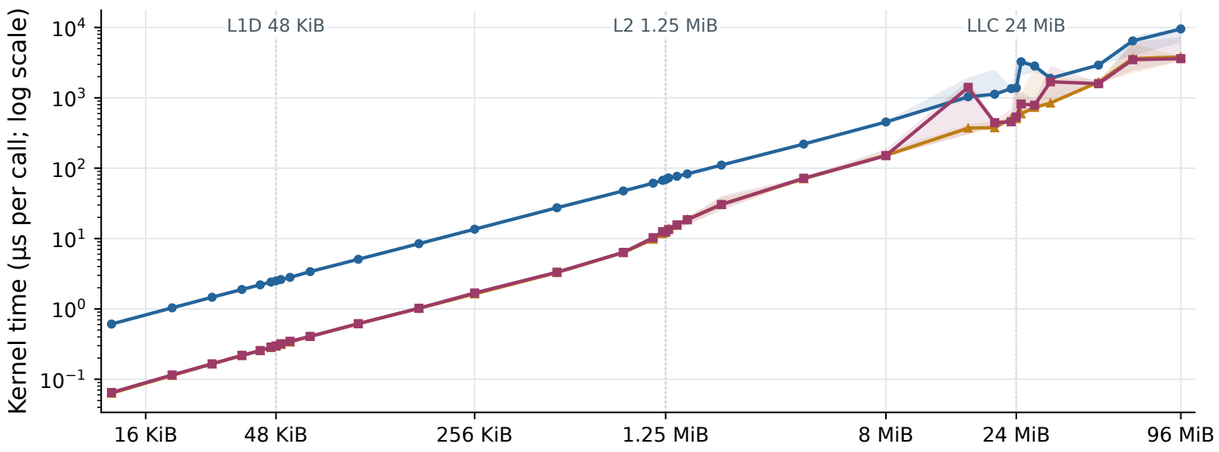

AXPY · float32

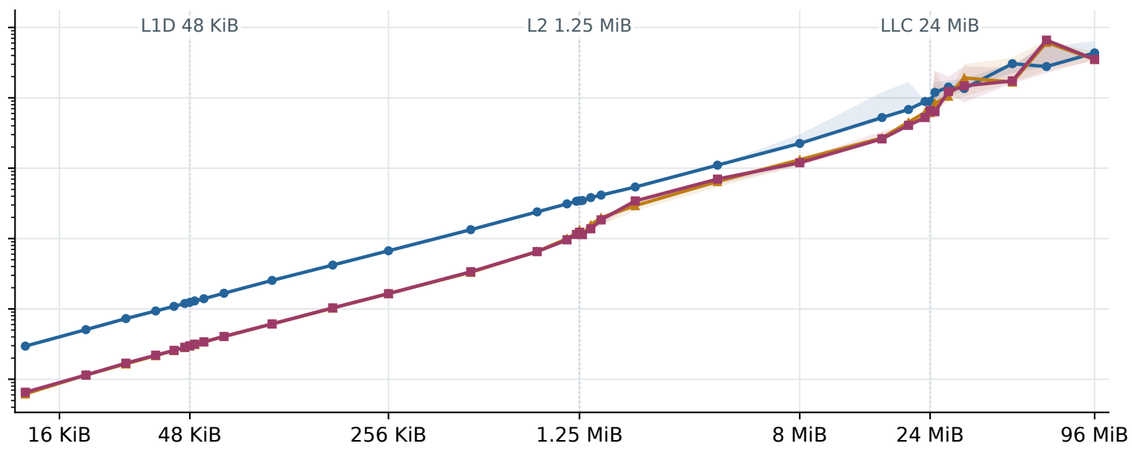

AXPY · float64

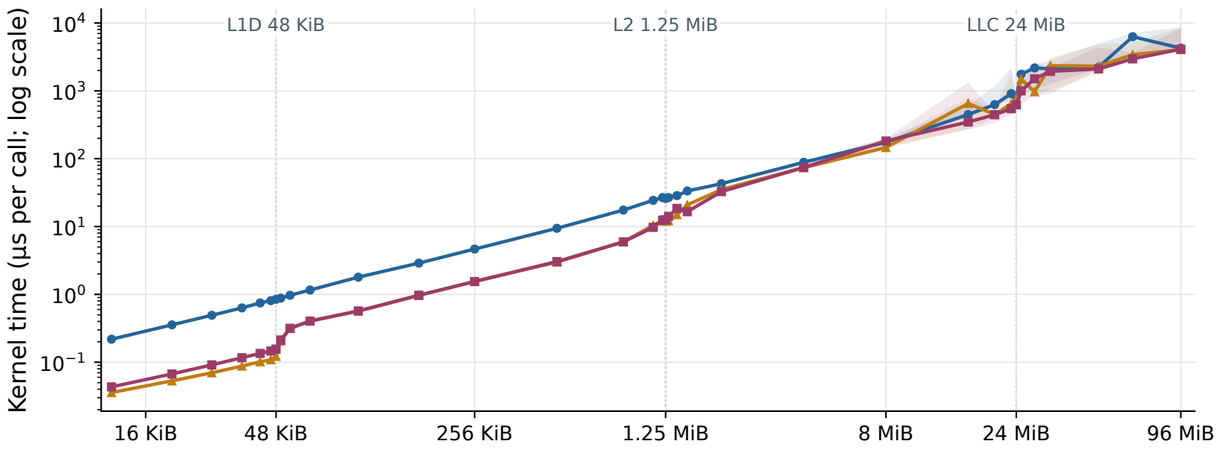

Dot product · float32

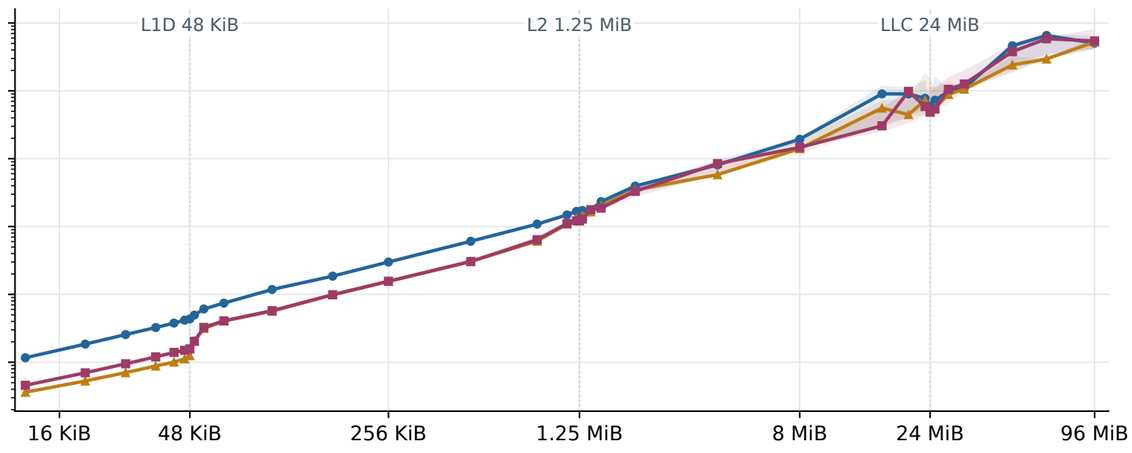

Dot product · float64

Elementwise multiply · float32

Elementwise multiply · float64

Total active working set across kernel arrays (log₂ scale)

Markers are actual measurements. Lines connect them; no synthetic or smoothed data points. Shading spans three process-median results (not a confidence interval).

Each implementation/size has 3 process repeats × 5 validated trials. AVX2, relaxed finite-input FP; frequency/SMT not isolated. Dotted cache capacities do not prove residency.
